PSS Clinic Toolkit – Smoking Status

EMR and Data Entry Requirements

EMR knowledge prerequisites:

- Familiarity with recall tools within the EMR

Each report in the toolkit has specific data requirements in addition to the following:

- Patient charts must be assigned to a provider
- Accurate 'Active' status of patient charts ('Active' status includes rostered and non-rostered patients)

Indicators

Below you will find explanations of the indicators. Each entry includes the indicator's purpose and any charting and documentation requirements.

Pts 12+: Smoking Status

i4C Indicator PHC-SMK-001: Smoking Status v 2.0

Category: Preventive Health Care/Smoking

The **Smoking Status Properly Recorded** indicator is based on the **AFHTO** indicator framework, version D2D 5.0 v1 Jun 2017.

Indicator Definition: Patients aged 12 and older for whom smoking status is recorded.

Purpose: Identify patients without smoking status documented and provide insight into the effectiveness of smoking documentation processes.

Suggested use: To initiate screening for your smoking population.

Base Population: 'Active' Demographic Status, age 12+

Metric Criteria:

Smokers: WITH a Risk factor documented as 'Current smoker' in PS Suite.

Non-smokers: WITH a Risk factor documented as 'Never Smoked' or 'Ex-smoker' in PS Suite.

Not documented: WITHOUT a RISK factor documented containing 'smoke' in PS Suite.
